Project Overview

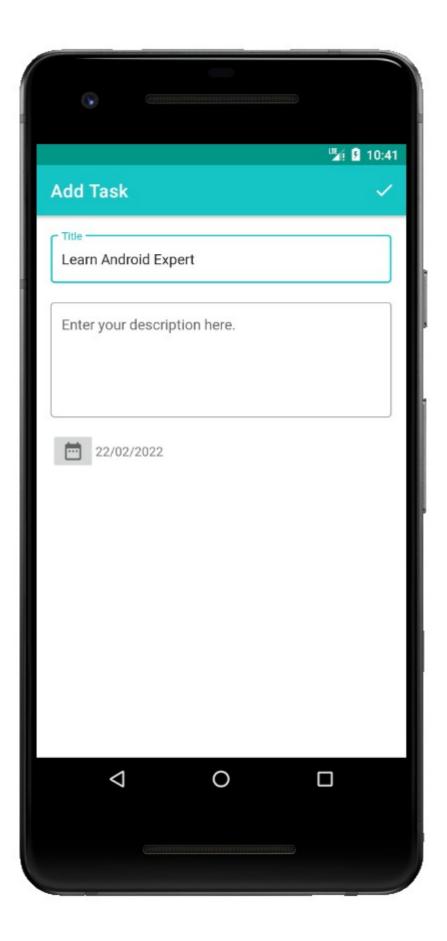

These are the list of features that is available on the starter project for this app. You will need to have a good understanding of all these features to be able to do the simulation.

List Screen

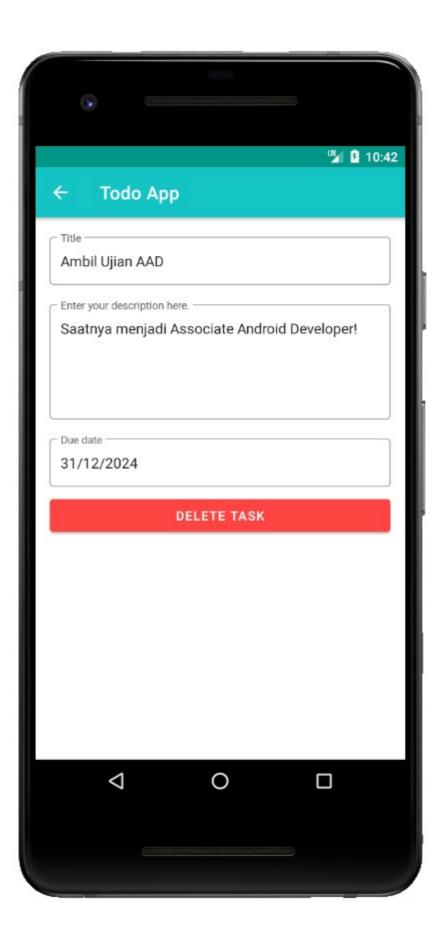

- Option Menu
- • Filter tasks by all, active, or completed.
- • Navigate to the Settings screen.
- Floating Action Button (FAB) :
- • android.R.drawable.ic_input_add
- List item :
- • Checkbox (R.id.item_checkbox)
- • TaskTitleView (R.id.item_tv_title)
- ** TextAppearance : MaterialComponents.Headline6
- ** MaxLines :1
- TextView (R.id.item_tv_description)
- $\bullet \quad \circ \quad \text{TextAppearance} \, : \, \text{MaterialComponents.Subtitle2}$

Add Task Screen

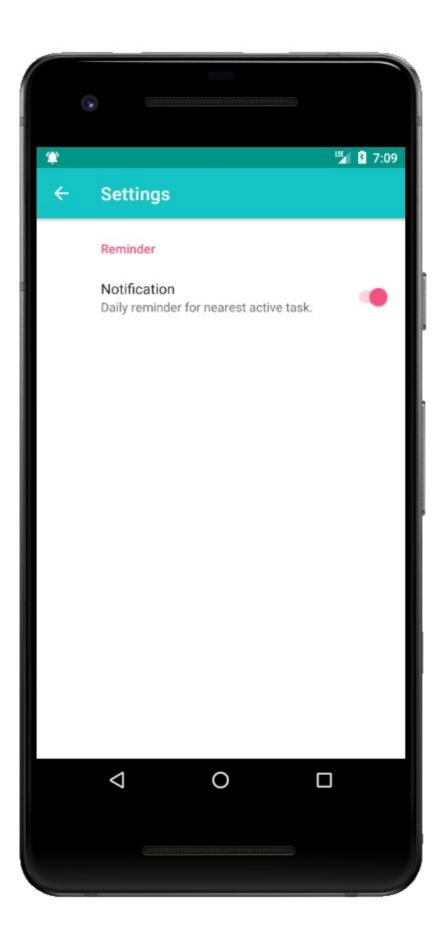

- Option Menu
- • Save Task
- Input
- • TextInputEditText (R.id.add_ed_title) -> MaxLines : 1
- • TextInputEditText (R.id.add_ed_description) -> MaxLines : 5
- Image Button
- on Click : showDatePicker, src : @drawabale/ic_date

Detail Task Screen

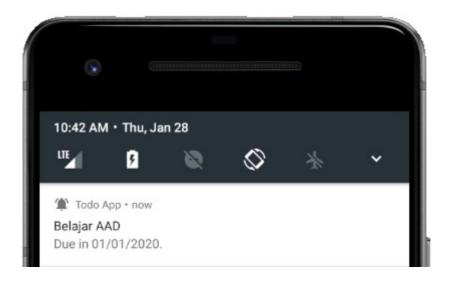

- Show data
- TextInputEditText (R.id.detail_ed_title) -> MaxLines : 1, Focusable : false
- TextInputEditText (R.id.detail_ed_description) -> MaxLines : 5 ,
 Focusable : false
- TextInputEditText (R.id.detail_ed_due_date) -> Focusable: False
- Button (R.id.btn_delete_task) -> backgroundTint:
 @android:color/holo_red_light
- Up Navigation Button :
- • Navigates to List Screen

Settings Screen

- Setting Preference:
- Reminder Notification -> Toggle setting to enable or disable daily reminder notification.
- Up Navigation Button
- • Navigates to List Screen

Notifications

- Small icon : R.drawable.ic_notification
- Content title : Nearest Active Task Title
- Content text : R.string.notify_content with Nearest Active Task Due Date

Task

- Define a local database table and DAO (data access object) based on schema in app/schemas/tasks.json. Use FilterUtils#geFilteredQuery to create a filterable query.
- 2. Initiate RecyclerView with TaskAdapter and update database when onCheckChange.
- 3. Display title in list-item based on state using TitleTextView (CustomView)
- 4. Show a detailed task when the list is selected and implement a delete action.
- 5. Create AddTaskViewModel class to insert a new "task" into the database.
- 6. Schedule and cancel daily reminder using WorkManager. If notification preference is on, get the earliest active task from the repository and show notification with pending intent.
- 7. Address the following comment from the QA team: SnackBar does not show when the task completed/activated.
- 8. Write UI test to validate when user tap Add Task (+), the AddTaskActivity displayed.

Exit Interview

Tujuan wawancara ini adalah untuk melihat seberapa baik Anda memahami proyek ujian:

- 1. Proyek apa yang telah Anda kerjakan?
- 2. Bagian mana yang paling sulit?

- 3. Komponen apa yang telah digunakan untuk menampilkan daftar tugas?
- 4. Bagaimana cara kerja pengingat notifikasi?
- 5. Mengapa kita membutuhkan Tampilan Kustom?

Tips

Berikut adalah beberapa tips untuk menjawab setiap pertanyaan:

- 1. Ceritakan tentang apa tujuan dan fitur aplikasi. Anda juga dapat memberi tahu arsitektur proyek.
- 2. Bicara tentang tugas mana yang paling sulit. Jelaskan mengapa sulit dan bagaimana Anda mengatasi masalah itu.
- 3. Beri tahu komponen yang digunakan untuk menampilkan tugas, seperti RecyclerView, adaptor, pengelola tata letak, dan Paging. Anda juga dapat mengetahui dari mana data tersebut berasal.
- 4. Beri tahu alur kerja tentang cara mengaktifkan pengingat dan jelaskan secara teknis komponen apa yang digunakan, seperti SharedPreferences, WorkManager (WorkRequest, Worker), Notification Manager, Repository untuk mendapatkan data, dan Pending Intent.
- 5. Jelaskan arti dari Tampilan Kustom. Tunjukkan Tampilan Kustom apa yang digunakan dalam aplikasi ini beserta fitur dan manfaatnya.
